## Public Map Template Total Population by Census Area

Each number indicates the total population of that "census area". Each district must have a substantially equal population. The population of each of the five districts should be as close to 11,958 as possible, with a difference of no more than 1,196 between the lowest and the highest. This mapping tool also includes areas that are to be annexed to the city and should be included in the new district maps. The key streets have been indicated on the map. Note that census areas do not always follow street lines. Use your knowledge of the community to identify unlabeled areas.

Use a dark pen to draw your map. You should try to follow the census area lines; however, if you think an area needs to be divided, you can draw your map to reflect it. You can also use color to shade in districts. Once this is done, you can send your map to the City Clerk's office at City Hall. You can submit your map in person, by mail, or by email to the City's demographic advisor: [stephanie.smith@bbklaw.com](mailto:stephanie.smith@bbklaw.com).
